- Information Systems
- IT Audit
- Fraud assessment
- GAAP Principles
- IFRS standards
- PHIPA, PIPEDA
- FIPPA/MFIPPA
- HIPAA

TECHNICAL AND PROFESSIONAL SKILLS

- Business Analysis: Business Process Mapping, User Stories, Acceptance Criteria, Gap Analysis, Impact Analysis, Stakeholder Management, Requirements Gathering, Process Improvement, Workflow Optimization, Agile Principles.
- Data Analysis: Data Cleaning, Data Validation, SQL Querying, Key Performance Indicators, Trend Analysis, Dashboard Planning, Insight Generation, Data Quality Checks, ETL Process, Data Standardization, Data Profiling.
- Tools: SQL, Python, VBA, Microsoft Excel (Pivot Tables, Power Query, XLOOKUP), Power BI, Tableau, Jira, Scrum, Confluence, Microsoft Office, SharePoint, Generative AI, Prompt Engineering.
- Soft Skills: Analytical Thinking, Problem Solving, Written and Verbal Communication, Attention to Detail, Decision Making, Cross-Functional Communication, Collaboration, Time Management, Adaptability, Stakeholder Presentation, Prioritization.
- Reporting: Data Visualization, Management Reporting, KPI Tracking, Ad Hoc Reporting, Storytelling, Interactive Dashboards, Executive Summaries.

WORK EXPERIENCE

- Finance, Accounting, Tax Specialist (Volunteer), NeedList.org – Toronto, ON June 2025 – August 2025
- Improved tax reporting with Excel formulas and data validation, cutting calculation time by 50 percent.
 - Reduced rework by preparing audit ready documents and reconciliation evidence, cutting revisions by 30 percent.
 - Strengthened stakeholder support by standardizing tax documentation and evidence, improving follow ups.
- HELIX Entrepreneur, Seneca Polytechnic – Toronto, ON May 2025 – August 2025
- Improved pricing and budgeting by benchmarking 12 competitors and building a forecast model in a 10-slide deck.
 - Reduced response time by building an intake workflow for 25 weekly requests, improving turnaround by 30 percent.
 - Increased delivery accountability by standardizing tracking and follow-ups, reducing missed items by 20 percent.
- Customer Service Representative, Seneca Polytechnic – Toronto, ON August 2024 – April 2026
- Resolved customer issues on the same day by prioritizing high volume requests, active listening, and clear verbal and written updates, increasing same day resolution by 20 percent.
 - Documented cases in Excel and troubleshoot issues before escalation, reducing repeat follow ups by 25 percent.
 - Coordinated with supervisors and internal teams to escalate complex cases with clear issue summaries and recommended next steps, improving turnaround time by 15 percent.
- Crew Member, Bingz – Markham, ON December 2022 – August 2024
- Processed 80+ transactions accurately, by handling POS cash and card payments and balancing end of shift totals.
 - Reduced peak time delays by 25%, by coordinating order handoffs and resolving issues in real time with the team.
 - Improved service consistency by 10%, by training 8 new hires on service steps and quality checks.

PROJECTS

- YEES Energy Project and Cost-Benefit Analysis November 2023 – January 2024
- Extracted and validated 10,000 plus utility records using SQL queries and Excel reconciliation, reducing data inconsistencies and producing analysis ready tables for reporting.
 - Developed and visualized Power BI KPI dashboards across building types, quantifying 15.4 million dollars in potential savings and improving stakeholder decision.
 - Analyzed consumption and cost drivers and modelled reduction scenarios by property category, identifying 29 percent to 34 percent cost reduction potential across highest intensity segments.
- Credit Risk Loan Default Analysis January 2026 – February 2026
- Engineered and automated Python data preparation for a loan default dataset by fixing data types, handling missing values, and creating risk features, reducing prep time by 50 percent.
 - Validated risk patterns by analyzing default rates across debt-to-income bands and income tiers, identifying high risk segments with 2 times higher default incidence than the baseline group.
 - Visualized default behavior in Tableau with interactive risk segmentation views, improving interpretation speed by 35 percent during review and presentation walkthroughs.
- Hospital Length of Stay Analysis January 2026 – February 2026
- Extracted and validated 300,000 plus hospital encounter rows in SQL using null checks, duplicate checks, and range validation, improving dataset completeness and reliability for analysis.
 - Analyzed length of stay drivers and modelled cohort comparisons across age group and admission type, prioritizing the top 3 segments with the highest average length of stay for operational focus.
 - Visualized length of stay distributions and cohort KPIs in Power BI using interactive filters, reducing time to drill from overall metrics to subgroup insights by 40 percent.
- Tesla Production and Deliveries Analysis November 2025 – December 2025
- Engineered and validated a 2015 to 2024 production and deliveries dataset in Excel by standardizing model and year fields, reconciling totals across 10 years for consistent KPI tracking.
 - Visualized long term trends and variance drivers in Tableau by developing a refreshable KPI view, reducing manual reporting time by 30 percent through reusable analysis structure.
 - Developed a management ready PowerPoint from Tableau outputs to explain year over year changes, reducing follow up questions by 25 percent through clearer KPI storytelling.
